

HORIZONTAL BLADDER TANK BALANCED PRESSURE FOAM SUPPLY DEVICE

NPR020

Approvals: UL

- Reliable Water Powered Foam Supply
- Perfect For Low Ceiling Areas
- UL/FM Listed/ASME/National Board Registered
- Bladder UL162 Approved, Hi Tensile Pressure Formed Seams
- Interior Strainers And Flow Path Devices Integral To Tank
- Compatible With All Ratio Controllers

Description

The Bladder Tank is an integral component of the bladder tank proportioning system, which requires no external power other than an adequate water supply. A bladder tank, with an appropriate proportioner(s), injects foam concentrate into the water supply of a fire protection system and automatically proportions over a wide range of flows and pressures.

The National Foam bladder tank is a steel pressure vessel fitted with an internal bladder that stores foam concentrate. During operation, water supplied to the bladder tank displaces the foam concentrate and collapses the bladder until the concentrate is depleted. The bladder tank discharges foam concentrate at approximately the same pressure as the water supplied at the water inlet connection to the tank. Since the bladder tank is pressurized, the bladder cannot be refilled during operation.

Features

- Compatible with all foam concentrates
- Easier to refill than vertical bladder tanks
- Bottom foam concentrate discharge keeps feed piping full, eliminating air pockets and preventing corrosion
- Better stability than vertical tanks in earthquake-prone areas
- Permanently welded lifting lugs for easy tank movement and positioning

Applications

Frequently used in aircraft hangars, loading racks, sprinkler systems, and offshore platforms.

Technical Specifications

The bladder tank shall be an ASME code welded carbon steel pressure vessel with a working pressure of 175 psi (12 bar). The tank shall be supplied in the horizontal configuration and shall be mounted on two permanently attached saddle supports with holes for mounting bolts. A flexible, thermoplastic vulcanized rubber internal bladder separates the foam concentrate from the incoming water. The bladder shall be manufactured with single piece nozzles and all seams shall be temperature/pressure high tensile strength using no adhesives. The tank shall have perforated PVC schedule 80 center discharge piping, located within the bladder, to ensure that foam concentrate flows to the bottom discharge. A section of 1-inch I.D. rubber hose installed between the bladder and tank shell, shall extend from the water vent to the water drain connection, preventing bladder obstruction at these openings.

All external piping shall be Schedule 40, and shall be brass for foam concentrate and carbon steel for water. Brass or bronze ball valves of the locking handle type, in accordance with NFPA requirements for valve supervision, shall be supplied, and shall be complete with identification labels on the handles. Tank shall include all necessary drain and vent valves, concentrate fill piping, fill cup, and tank content/identification labels. External surfaces of tank and piping shall be coated with red high solids acrylic polyurethane finish.

Approvals and Listings

- Underwriters Laboratories, Inc. (UL Listed)

Technical Information

Materials of Construction:

Tank: Carbon steel, ASME code
 Bladder: Welded Seam Thermoplastic
 Internal Piping: Perforated PVC, Sch. 80
 External Piping:

Water Side: Carbon Steel,
 Sch. 40, Screwed
 Fm. Conc. Side: Brass, Sch.
 40, Screwed

Valves: Ball valve with locking handle, bronze body, and brass or chrome plated brass ball

Fill Funnel: Polyethylene, 7½" diameter cup x 1" male NPT spout

Exterior Finish:

Red high solids acrylic polyurethane (NF Spec AS1-06-030)

Working Pressure:

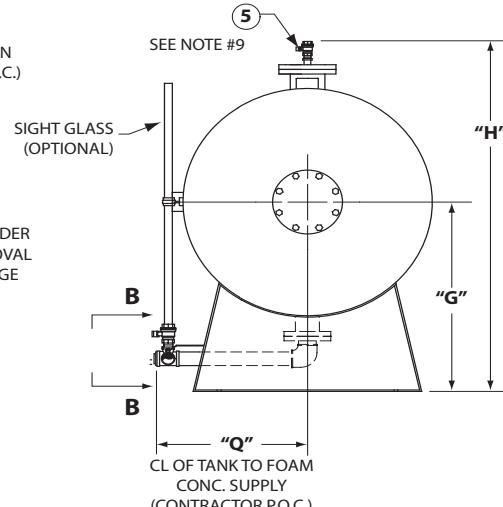

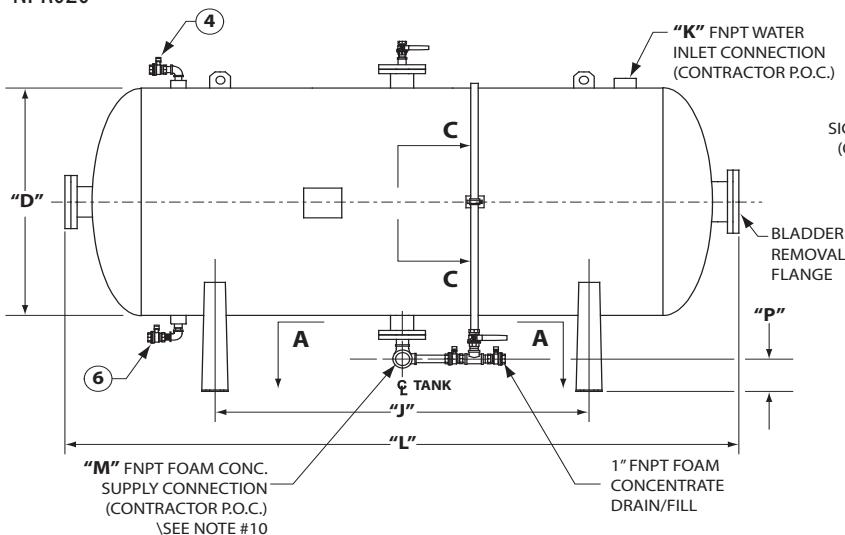

175 psi (12 bar)

Options

- Sight gauge: 1½" (38 mm) O.D. polycarbonate with bronze ball shut-off valve
- Higher tank working pressures
- Coal tar epoxy internal coating
- Special finishes
- Pressure relief valve
- Type 304 or 316 stainless steel piping, screwed or welded
- Fill kit
- Seismic supports
- Prepped
- Alternate discharge directions

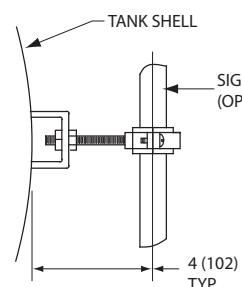

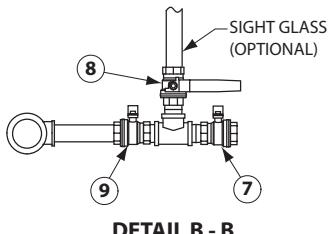

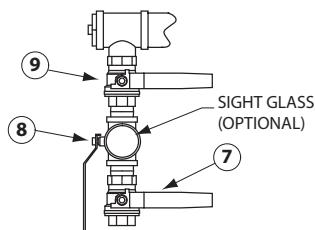

HORIZONTAL BLADDER TANK

VALVE DESCRIPTION

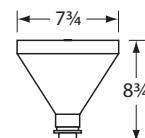

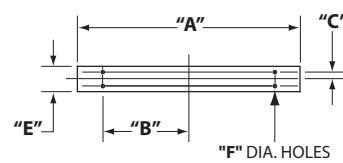

Valve No.	Description	Normal Position
4	Tank Water Vent	Closed
5	Concentrate Vent/Fill	Closed
6	Water Drain/Fill	Closed
7	Concentrate Drain/Fill	Closed
8	Sight Glass (Optional)	Closed
9	Sight Glass Supply (Optional)	Open

DETAIL C - C

Notes:

1. All dimensions are approximate and may vary slightly.
2. Weights listed apply to empty tanks.
3. All tank and valve openings will be plugged for shipping.
4. Optional sight glass assembly includes:
 - Polycarbonate sight glass tube, 1½" (38) O.D. open to atmosphere (vented cap)
 - Ball shutoff valve
 - Split pipe clamp w/ threaded rod
5. Fill funnel and optional sight glass tube will be packed and shipped separately.
6. Optional sight glass level check cannot be performed with alcohol type AFFF concentrates. Refer to the operating and maintenance manual for further instructions.
7. Contents label will be supplied to customer by NF and applied by customer to area provided on caution label.
8. When designing a building to house bladder tanks, provisions must be made to allow for the removal of the internal piping and bladder. These items are the full length and height of tank.
9. Concentrate vent valve #5 will also be used to top off the concentrate level. A fill funnel will be provided with each tank for this purpose.
10. End user shall supply isolation valve at connection point "M".
11. For non-standard or special tanks, refer to the tank's specific outline assembly drawing for details.

FILL FUNNEL

TO BE SCREWED INTO VALVE 5
